# LA NET
CASE STUDY

sendflex
TECHNOLOGY

OVERVIEW

Sendflex Technology, INC. is a strategic technology partner of WiseTech Global, a leader in international logistics solutions. Our mission is to use machine learning technology to help shippers effectively manage a broader and more complex array of delivery services.

THE CLIENT

Industry :   Software Development
Locations :   Massachusetts, USA
Technology : Azure Infrastructure, Azure Kubernetes Services (AKS), Cosmos DB, Template specs
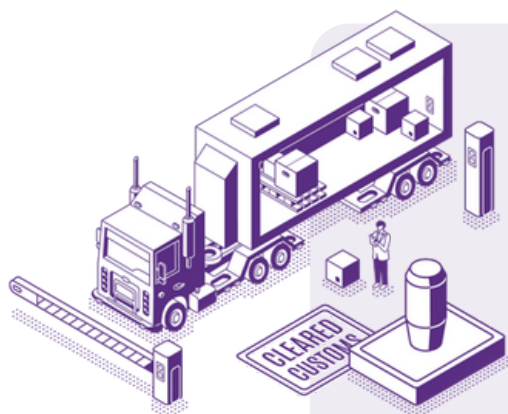

THE REQUIREMENT

Sendflex Technology needed to ensure their Microsoft Azure platform was setup securely and that best practices were in place. Development, staging and production environments needed to be prepared with secure networking, monitoring and governance. Sendflex also needed some flexibility to configure and test Azure elements quickly and easily whilst balancing cost.

THE SOLUTION AND BENEFITS

LA NET designed and built out our baseline landing zone in Azure based on the Cloud Adoption Framework for Microsoft Azure. LA NET ensured that the security and governance required by Sendflex were in place and that the Azure Kubernetes (AKS) platform was deployed smoothly and securely using best practices. This provided a platform we could confidently use and move to production without issues.

"Working with the LA NET team was painless! They answered all our questions and provided prompt feedback and valuable guidance whenever we needed it. No task was too small for them, and they continued to assist once we were up and running successfully."
