

- MICROSOFT AZURE CASE STUDY -

THE CLIENT

- INDUSTRY:** Software Development
LOCATIONS: UK, France, India, Singapore
TECH: Microsoft Azure Infrastructure
Web Apps, SQL Server, WAF, NAT Gateway
WEBSITE: <https://tucsonotechnology.com>
SUMMARY: Shipping Resource Management system

THE SITUATION

- Tucson Technology (T2) needed a Microsoft Azure specialist to help manage the infrastructure required for a new cloud only multi tenant system.
- The software has been written from the ground up using the latest development stacks available.
- T2 needed a technology partner to make sure the implementation and environment was highly secure, resilient and performant.

THE CLIENTS WORDS

“

LA NET worked with us to ensure our cloud infrastructure was optimal in terms of security, cost, performance, resilience and high availability.

We see LA NET as our extended team and a trusted advisor.

The team are highly responsive and capable!

Mark Nicholls
Director at Tucson Technology

HOW DID LA NET HELP?

T2 has developed a world class Shipping Resource Management system (SRM). They needed a partner who could ensure the supporting infrastructure within Microsoft Azure was as optimal and secure as it could be.

LA NET setup the base Azure landing zone environment including governance, monitoring and more. LA NET then advised on the best architecture and security options for their workloads.

- We helped T2 to make best use of the Azure platform using the Microsoft CAF and WAF frameworks.
- We worked closely with T2 to ensure the security and governance required were in place. We assisted with customer RFPs and provided security guidance.
- We gave access to our Helpdesk, which responds to all requests within 60 minutes (or less).
